EDUCATION

University of California, Riverside

B.S. in Computer Engineering | GPA: 3.7/4.0

March 2025

Relevant Courses: Data Structures, Natural Language Processing, Algorithms & Analysis, AI, Machine Learning, Web Dev

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, SQL, Assembly, Swift, MATLAB

Database: Oracle, Microsoft SQL Server, MySQL, PostgreSQL, MongoDB

Web Development: HTML, CSS, JavaScript, jQuery, React.js, Node.js, Figma

Operating Systems: Windows, MacOS

Tools: Git, Visual Studio Code, Jupyter, CLion, PSpice, LTspice

Libraries: Pandas, NumPy, Flask, Natural Language Toolkit

INTERNSHIP EXPERIENCE

Data Automation Intern | Kyobee | Remote

June 2024 - September 2024

- Collaborated with a team using automation tools and **SQL** algorithms, improving 94,000 database entries' accuracy and query performance by 30%.
- Developed automation scripts with SQL and testing automation, reducing manual data entry errors by 40% and enhancing data consistency.
- Executed automated tests, debugged scripts, and ensured seamless system integration with accurate data visualization for better decision-making.

Software Engineer Intern | First American | Santa Ana, CA

June 2023 - August 2023

- Invested 200+ hours mastering **JavaScript**, **HTML**, **CSS**, and **React.js**, creating responsive web apps that boosted user engagement and enhanced client-side experiences.
- Developed 120+ unit and integration tests for WireLink UI using React.js, improving system reliability and supporting \$5M+ in daily transactions utilizing **VS Code**.
- Gained proficiency in **API** lifecycle management, optimizing data flow between front-end and server, reducing latency.
- Utilized **Cypress** to automate regression and smoke tests for React.js apps, cutting pre-release bugs by 60% and minimizing transaction-related downtime.

WORK EXPERIENCE

Lab Assistant | UCR, Center For Environmental Research And Technology

May 2023 - March 2024

- Actively engaged in groundbreaking research initiatives that focused on innovating vehicle technologies to enhance fuel efficiency and reduce emissions.
- With the help of PHD students developed prototypes that demonstrated a potential reduction in carbon emissions by up to 20% in preliminary tests.
- Managed the calibration, maintenance, and installing of the OSAR (Onboard Sensing, Analysis and Reporting) testing apparatus resulting in improved data precision and operational efficiency.

PROJECTS

IKEA Rogue-Like game | Group Project | <https://github.com/Hirschheda/IKEA-GAME>

- Collaborated with a team of 5 others and developed a game where the main character is stuck in an IKEA and has to escape while fighting off pieces of furniture.
- Created the player movement/dash mechanism, game sounds, and room designs with **Python** through **GoDot**, and open-source game engine

Enviroptimize | CutieHack Hackathon | <https://github.com/Hirschheda/Enviroptimize>

- Collaborated with 2 others and developed an app where you could take a picture of your fridge and it would be able to identify foods using **Core-ML** and match it with their sustainability score.
- Offers the user recommendations to reduce waste and overall carbon footprint by up to 85% with **Swift**.
- Created an ML algorithm using 10,000 images as reference points to recognize food items, achieving an identification accuracy of 85%.
